

P19 VOLTAGE INDICATOR

INDICATES INSTANTLY WHETHER A 19 PIN CIRCUIT IS 120V OR 208V!

The P19 Voltage Indicator is a compact, user-friendly device that lets you determine the voltage of any powered P19 circuit – a cost-effective tool to help avoid damaging expensive equipment by plugging it into the wrong voltage.

The indicator is designed to work with any standard P19 connector, and identifies line-to-line vs line-to-neutral circuits. Simply plug the cable into the device and LED indicators light up to show the presence of voltage on each circuit, and whether each individual circuit has 120V or 208V across its terminals. No more need to follow tangles of cable back to the source just to be sure of the voltage!

Indicator
(enlarged)

Part #: A-02-001-0001

Unique design and function

Easy to use

Graphic indicator is ergonomic and intuitive

Works at connector end of cable

Helps prevent damage to expensive equipment

Blue indicator lights show 120VAC.
Blue & Red indicator lights together show 208VAC.

Specifications

4.5" L x 2.5" W x 2.5" H

10.5 oz.

Comes with convenient carrying lanyard
